Add WeChat powcoder

- Each cascade frame is from a different call to cascade.
- Until the Return value appears, that call has not completed.
- Any statement can appear before or after the recursive call.

Global frame

`cascade` | `func cascade(n)[parent=Global]`

`f1: cascade[parent=Global]`

`n` | 123

Return value | None

```
f2: cascade[parent=Global]
```

n	12
Return value	None

```
f3: cascade[parent=Global]
```

n	1
Return value	None

Print output:

```
123
12
1
12
123
```

Add WeChat powcoder

# Counting partitions problem

The number of partitions of a positive integer  $n$ , using parts up to size  $m$ , is the number of ways in which  $n$  can be expressed as the sum of positive integer parts up to  $m$  in increasing order.

`count_partitions(6, 4)`

$$2 + 4 = 6$$

$$1 + 1 + 4 = 6$$

$$3 + 3 = 6$$

$$1 + 2 + 3 = 6$$

$$1 + 1 + 1 + 3 = 6$$

$$2 + 2 + 2 = 6$$

$$1 + 1 + 2 + 2 = 6$$

$$1 + 1 + 1 + 1 + 2 = 6$$

$$1 + 1 + 1 + 1 + 1 + 1 = 6$$
